International application No.
PCT/EP2004/006121

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

the shafts being provided with idler gear wheels, fixed gear wheels and clutch elements (11, 15, 18 and 21), forming a plurality of countershaft units for shifting gear and changing direction,

comprising four forward gears and two reverse gears, the output shaft (4) also being used as a countershaft for one gear,

the gear wheels of one countershaft (6) corresponding to a forward gear unit and the gear wheels of one further countershaft (9) corresponding to a further forward gear unit meshing with the gear wheels of the input shaft (3), and

both these countershafts (6, 9) being rotatable, in any desired angular position, about the input shaft (3).

The subject matter of the present claim 1 differs therefrom:

in that further countershafts (4, 6) corresponding to the gears are arranged one behind the other, relative to the input shaft (3), on one side of said input shaft (3) and in that each of the further countershafts (4, 6) corresponding to the gears is rotatable through a large angle sector about the countershaft that is closest in the direction of the input shaft (3), the further countershafts (4, 6) corresponding to the gears each being rotatable about the shaft of the gear wheel immediately upstream in the power flow.

International application No.
PCT/EP2004/006121

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The present application therefore satisfies the requirements of PCT Article 33(2) since the subject matter of the single independent claim, claim 1, is novel in relation to the prior art as defined in the Regulations (PCT Rule 64.1 to 64.3).

Inventive step

The problem addressed by the present invention can consequently be regarded as that of devising a multi-gear power transmission which is of a versatile design.

The solution to the above problem, as proposed in claim 1 of the present application, does not appear to be known from any of the searched documents per se, nor does it appear to be rendered obvious by the prior art in its entirety.

In consequence, the present application appears to satisfy the requirement of PCT Article 33(3) since the subject matter of claim 1 appears to involve an inventive step (PCT Rule 65.1 and 65.2).

Industrial applicability

The subject matter of claim 1 also appears to satisfy the requirements of PCT Article 33(4) since it can be made at least in the field of motor vehicle engineering.

International application No.
PCT/EP2004/006121

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Claims dependent on claim 1

The subject matter of dependent claims **2-6** relates to further embodiments of the invention according to claim 1 and said claims appear likewise to satisfy the requirements of PCT Article 33(2) to (4).
